

TECHNICAL SHEET

Maize variety Bag 97 TZE Composite 3 x 4

Presentation of maize (CMA/AOC, 2005)

The corn, *Zea mays* (L), belongs to the genus *Zea*, family Poaceae, tribe Andropogoneae. It is an annual herbaceous cereal, with generally weak or even null tillering and an abundant fibrous root system. It presents a large morphological diversity according to the varieties. There are several varieties of corn grown for human consumption: sweet corn, pearl corn, dent corn, flourey corn and glass corn, which is also used as fodder. Ordinary immature corn, on the cob, is widely consumed, either boiled or roasted. Flourey corn, on the other hand, has a grain with a soft albumen, which is widely used as food in Mexico, Guatemala and the Andean countries. More recently, other varieties have appeared: oil-rich corn (appreciated in human food because of the presence of antioxidants that make it more stable), waxy corn (high content of amylopectin, used by some food industries or paper mills as a thickener), amyloid corn (high content of amylose, used by the industry as film for food packaging), etc. The whole grain is composed mainly of starch (64-78%, dry basis), proteins (7- 12%), lipids (12%) and fat (12%). 12%), lipids (4-6%), sugars (1.0-3.0%), minerals (1.0-1.5%), fiber (2.0-2.5%), and vitamins (Waston, 1987 cited in SEMASSA et al, 2016).

Characteristics of the technology

Bag 97 TZE Composite 3 x 4 is an open-pollinated short-cycle variety with white grains developed in Benin in 2008. This variety has grains of glassy texture and horny type.

Phyosanitary characteristics

Resistance to helminthosporiosis: Good

Resistance to stripe: Good

Resistance to rust: Good

Agronomic characteristics

Texture of the grain: Vitreous

Type of grain: Horned

Height of the plant: 160 cm

Number of rows of grains: 14

Number of grains per row: 34

Length of the ear: 15 cm

Height of ear insertion: 75 cm

Sowing-maturity cycle: 90 days

Drought tolerance: Good

Resistance to breakage: Very good

Sowing-flowering cycle: 50-55 days

Ear coverage: Good

Grain color: White

Targets of the technology

This variety can be grown by small and large producers. The grains are used to prepare Owô and Akassa (pasta made from corn), local dishes consumed daily by the Beninese and a large part of West Africans.
